

# McFLY in your MetaMask

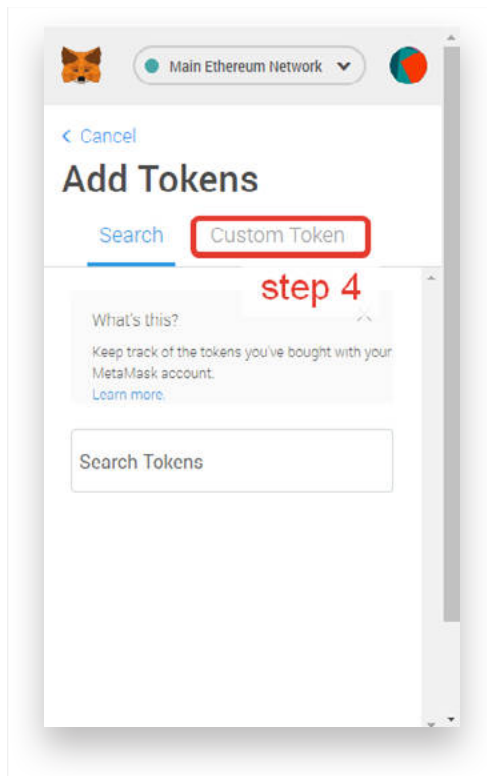

1. Open MetaMask, insert your password and log in.

2. In the Menu, opt for Tokens section.

3. In the Tokens section, click “Add Token”.

4. Then opt for “Custom Token” section to add properties defining the Token (Address, Symbol and Decimals).

5. Insert the following data into relevant fields:

**Token Address:**

0x17e2c574cf092950ef89fb4939c97db2086e796f

**Token Symbol:** McFLY

**Decimals of Precision:** 18

Then click “Next”.

# McFLY in your MyEtherWallet

1. Get authorised with MyEtherWallet in the your usual way.

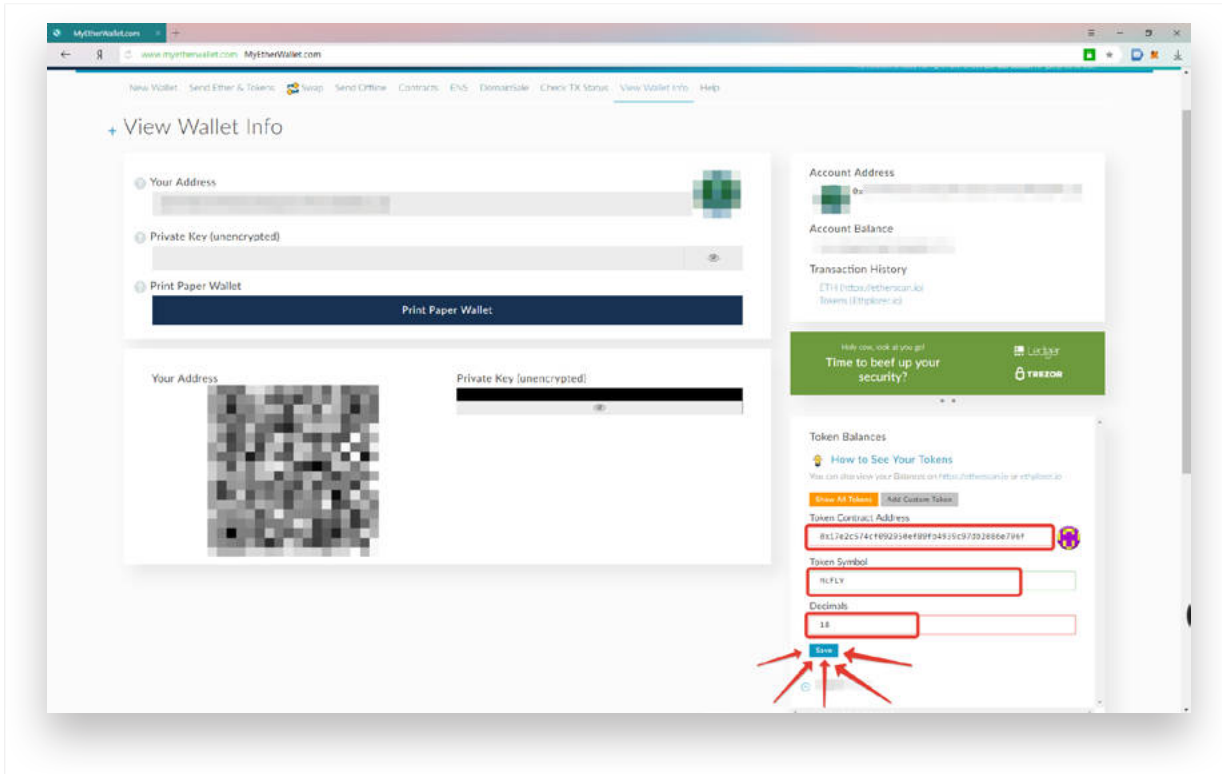

2. In the right-hand column find “Token Balances” section, and open “Add Custom Token” sub-section to add properties defining the Token (Address, Symbol and Decimals).

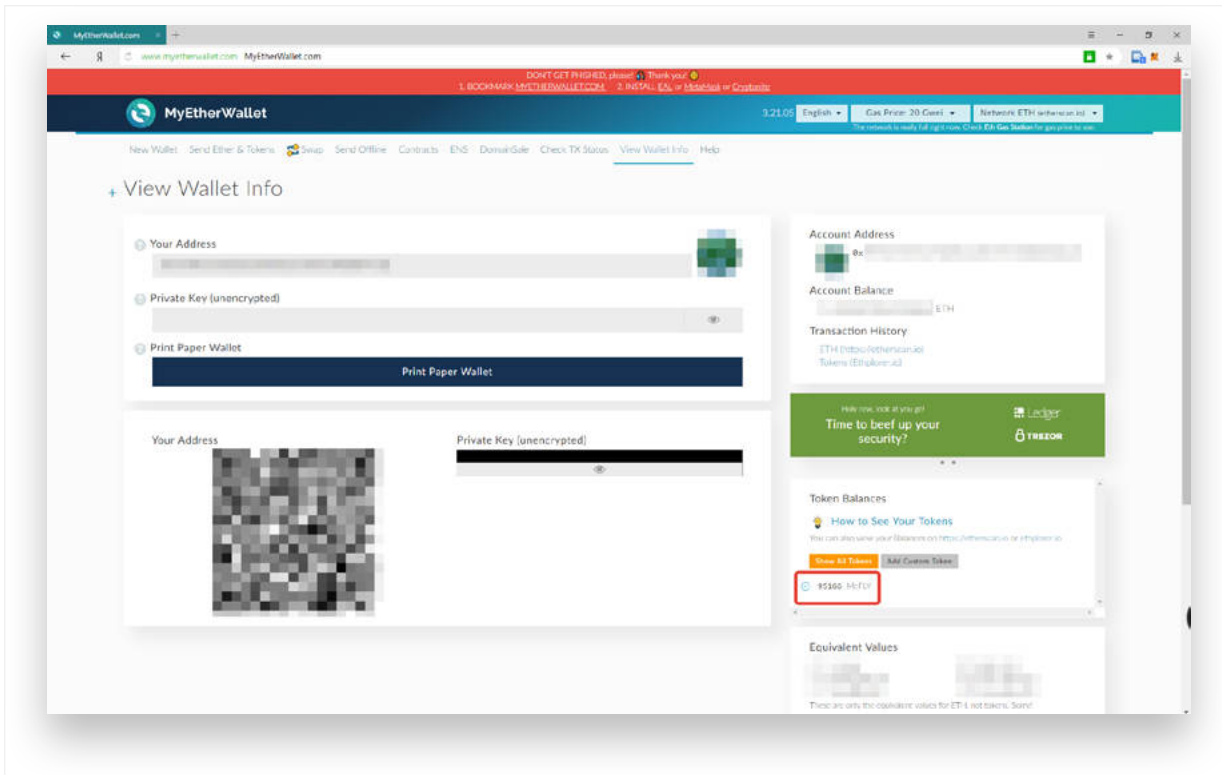

3. While there, insert the following data into relevant fields:  
**Token Address:** 0x17e2c574cf092950ef89fb4939c97db2086e796f  
**Token Symbol:** McFLY  
**Decimals of Precision:** 18  
Then click “Save”.

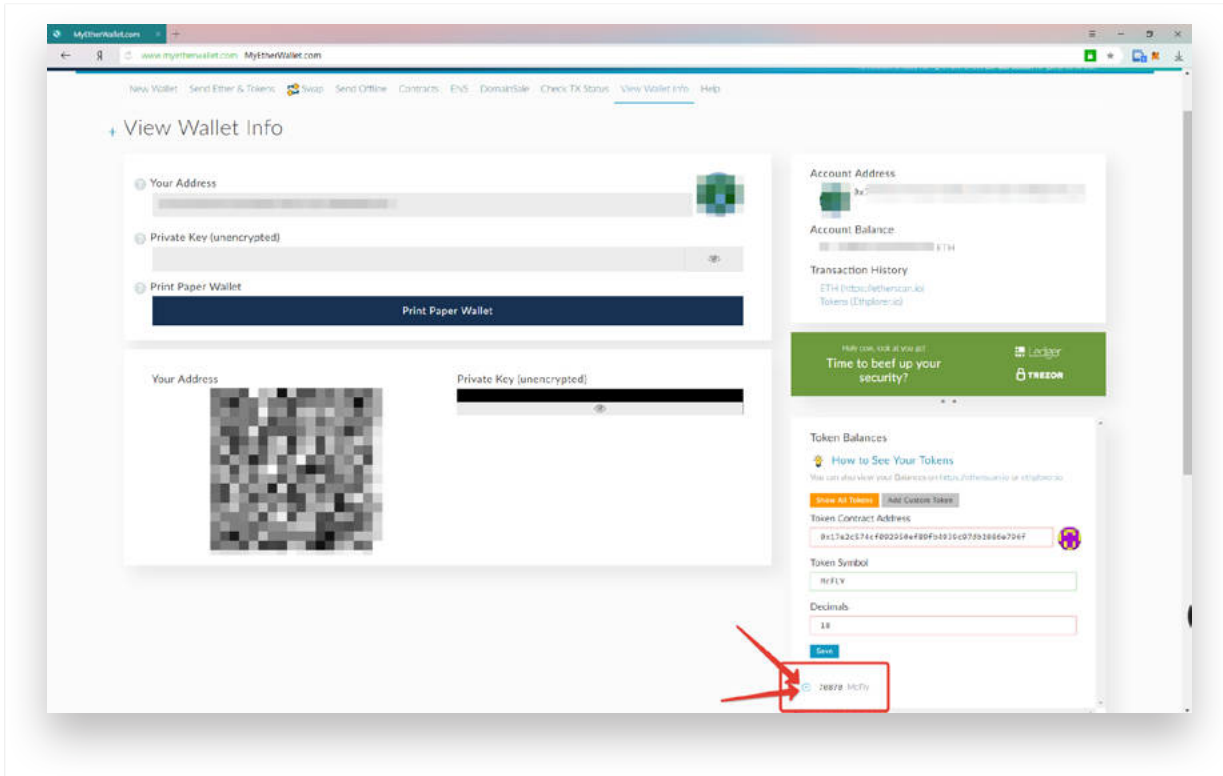

4. Now all your McFLY Tokens are correctly reflected in your MyEtherWallet.

**IMPORTANT!**

Should you already have McFly Tokens from the previous McFly.aero smart contract, MyEtherWallet may not allow reflecting McFLY Tokens from our current smart contract. If such is the case, to have the current McFLY Tokens reflected, you will have to delete the previous McFly Tokens from the Token Balances section.

Don't worry, you are not deleting the previous McFly Tokens entirely — this deletion is from the interface only. However, the previous McFly Tokens are not going to be used anywhere, and if you held them, in substitution you have received the same amount of the current McFLY Tokens to your balance anyway.
